COMP229 – Web Application Development

Project Part 5 - Final Presentation

Due: Week 14

Value: 15%

Final Presentation

Overview:
Working with your team, select one or more people to present your final web application project. It is recommended that only those most comfortable with presenting live are selected to represent your team.

Your presentation should include an overview of your web application, your planning process, lessons learned, and future possibilities.

Use a slide deck (MS PowerPoint or Google Slides) during your presentation to keep you organized. Your presentation should be no longer than 10 minutes (including your demonstration).

Even though you're presenting live, you are encouraged to record your presentation in advance, as a backup alternative, just in case of any technical issue that impacts the whole team.

All members of your team should be present (attend the class) and be prepared to answer questions about **any aspect** of your project regardless of their role or which features they helped create.

Presentation evaluation will consider your **presentation materials** (which should be appropriate for the type of site you have created) and your **presentation value** (vocal presentation, knowledge of materials, professionalism).

Instructions :
Your presentation will have the following requirements:
Tasks: Create a Slide for your Final Presentation that contains the following slides:
- **Title Page (1 Slide):** Your presentation should include a **Title page** with your **team logo** and a screenshot of your final Web Application

- **Roles (1 slide)** - This slide must contain a mugshot of each member of your group along with their **development role** and their **specific responsibilities** for the project.
- **Web Application Overview (1 slide)** - You will use this slide as a backdrop to summarize what your Web Application is about and which project type you chose.
- **Planning (1 or more slides)** – This section will detail your planned features. Describe why any features were **not** implemented. Discuss any challenges you had when executing your plan.
- **Instructions (1 or more slides)** – This section will describe how to access and use your site's basic features (e.g.: create an advertisement, create a tournament, create a new ticket, etc.)
- **Site Demo (1 slide)** – Create one slide that reads "**Site Demo**". You will use that slide to signal that you will begin a live demonstration. During your **demonstration**, you will **showcase** your Site's functionality. Each specific requirement from the Project Overview document should be highlighted.
    - You should attempt to visit most pages on your site.
    - You should demonstrate using the deployed version (production) on the cloud. Do NOT use localhost for your demonstration.
    - In terms of code, you **only** need to present the **models** of the backend and the frontend, justifying your design decision.
    - Do NOT explain other files or classes, except if it was asked.
- **Team Retrospective (1 slide) –** Discuss the challenges your group had to overcome during development and how you would approach the project differently if started again.
- **Future Possibilities (1 slide)** - Discuss how you would expand your app given more time for the development or if you would release it on the market.

Optional (Presentation backup):
As the Final Presentation will take place in the last class of the semester and there are grades involved, you do not have a second chance to do it if something unexpected happens. So, you might want to be prepared to handle that, because there are no grades if there is no presentation.

As a backup, create a Video presentation on **YouTube** or another streaming provider.
- You will **demonstrate** as per the requirements above.
- Sound for your Video must at an appropriate level so that your voice may be **clearly heard,** and your screen resolution should be set so that your code and site details are **clearly visible**
- Your Short Video should run no more than 10 minutes

Task 2:
Submit your slides and the Video link (if opted) to the appropriate assignment folder on e-Centennial.

SUBMITTING YOUR WORK

Your submission should include:
1. Your presentation document (MS PowerPoint) or a link to Google Slides.
2. (Optional) A **link** to your demonstration video (please do not upload the full video)

This assignment is weighted **15%** of your total mark for this course.
